

How to Connect to the Sufferfest App Via Bluetooth

wattbike

Connecting to the Sufferfest app

- a) Download and install the Sufferfest app on your phone from the app store and log in using your details
- b) Turn on the Wattbike Performance Monitor (WPM) and ensure the Bluetooth (BLE) is on (small icon should show at the bottom of the screen). If your monitor has BLE but it is not enabled head to Settings-> 'Remote' Tab-> Turn BLE on.
- c) On the Sufferfest mobile app. Tap on the workout you wish to follow, tap play on the 'Video Details' screen. The 'Ride check' screen is where you connect the app with the bike, you will find all the sensors available. The Wattbike's sensors will show as 'WattbikePM' followed by the serial number* of the bike. In this example the serial number being used is 25005300.
For connecting ANT+ HR belts to strava, you will need a Wahoo ANT+ dongle for your phone if your phone does not have an ANT+ chip built in. In this example a dual ANT+/BLE HR belt has been used.

**For this step ensure you select the serial number of the WPM you are riding on. This can be found on the bottom line of the monitor screen and is the last four or 5 digits of the monitor serial number found on the back of the monitor.*
- d) Tap on the 'Let's Ride' button and start your session.
